EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 4, line 6, "circuit" has been changed to ---first circuit---; line 12, "LED" has been deleted.

2. The sole figure should be labeled figure 1. Formal drawings with recommended changes are now required.

3. The following is an examiner's statement of reasons for allowance: the prior art does not teach or disclose a device comprising, in combination with the remaining features of the claim, an array of semiconductor light emitting devices; a first/second driver for supplying current to a first/second portion of the devices in the array, the first/second driver comprising: a first/second switch capable of adjusting an amount of current supplied to the first/second portion; a first/second control circuit capable of generating a first/second control signal for controlling the conductive state of the first/second switch; a first/second control loop capable of controlling an amount of light generated by the first/second portion at a level represented by a first/second reference signal by adjusting a duty cycle of the first/second control signal; and a relative intensity control loop capable of limiting the duty cycles of the first and second control signals to a limit value (claim 1); a device comprising, in combination with the remaining features

of the claim, an array of semiconductor light emitting devices; a plurality of driver circuits, each driver circuit comprising: a first comparator providing a first error signal at the output based on comparison of the signal representing the actual amount of light and the reference signal; a first circuit part providing a signal corresponding to a duty cycle of a control signal at the output; a second circuit part providing a control signal having a duty cycle proportional to the signal received from the first circuit part at the output; and a switch coupled to the output of the second circuit part; and a relative intensity control loop for limiting the duty cycles of each of the control signals to a limit value (claim 7).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Vu whose telephone number is (571) 272-1831. The examiner can normally be reached on M-F 8am-430pm.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
